

LightPanel SYSTEM with Glass

Addition of a Frosted Glass Diffuser on either one or both sides of our LightPanel System can add striking effects!

FRST-1: Frosted 1/4" Glass diffuser on one side (adds 3/8" to overall thickness)

FRST-2: Frosted 1/4" Glass diffuser on both sides (adds 5/8" to overall thickness)

Mounting Options: The glass adder to our LightPanel Systems is incredibly versatile. These may mount as do any normal EOS LightPanel (with the exception of drilling holes through them). These can even enhance shelving by laying flat on the surface and securing with doubled-sided tape.

Are these weight-bearing when used flat?: The glass is 1/4" thick and tempered. It can reasonably support dispersed weight as long as it won't suffer any rugged use / abuse.
